Education

- **PhD** (2010)
Rajiv Gandhi centre for Biotechnology
Trivandrum, India
- **M.Sc** (2001)
Government College of Science, Durg, India
- **B.Sc** (1999)
Government College of Science, Raipur, India

Technical Skills

- Experience in animal experimentation
- Experience in cell culture, transfection, generation and maintenance of stable cell lines
- Molecular biology techniques, Cloning, qRT-PCR, Sequencing
- Protein Biochemistry, quantitative and qualitative analysis of proteins using SDS-PAGE, Western blotting, 1D/2D- Gel electrophoresis, N-Terminal sequencing, Mass spectrometry, Immunoprecipitation
- Protein expression and purification
- Confocal Microscopy
- Histology, immunostaining
- Study of membrane protein-lipid interactions by Fluorescence Resonance Energy Transfer
- Electron Spin Resonance Spectroscopy (Spin labelling, Spin trapping)
- Isolation and purification of membrane Raft micro domains using detergent solubilization and density gradient ultra-centrifugation
- Biochemical assays for detection of ROS moieties, FURA-2AM assay for Calcium influx, NADPH-Cytochrome C reductase assay, Luciferase assay
- Bio-informatics: Use of Phoretix-1D Soft ware for densitometry, Primer 3 software for primer designing, Sequence alignment and analysis using DNASTAR MegAlign, Bioedit and NCBI-BLAST, SMART analysis for Protein domain architectures, Sigma-plot, Igor-plot for statistical analysis and plotting graphs, iVision-Mac image acquisition, processing, measurement, and analysis software

Statement of Research

I obtained PhD under the supervision of Dr Pradeep Kumar at the Rajiv Gandhi Centre for Biotechnology, Trivandrum, India. The topic of my doctoral research was "*Identification and characterization of membrane raft micro domains and raft associated proteins in Spermatozoa*". Using ESR Spectroscopy, Protein biochemistry and confocal microscopy, I studied the dynamic organization of membrane Raft micro domains on Murine and Caprine sperm during epididymal maturation, invitro capacitation and acrosome reaction. Our results show that membrane raft micro domains play an important role in spatiotemporal assembly of several protein complexes viz. NADPH oxidase, SNARE complex, TRP ion channels, Progesterone and Estrogen receptors, which is essential for regulation of downstream signaling of these proteins during functional maturation of spermatozoa.

After PhD I joined the Department of Cardiovascular Biology, Oklahoma Medical Research foundation, Oklahoma City as Postdoctoral associate. Here I got trained in Fluorescence Resonance Energy Transfer (FRET) microscopy and studied the molecular mechanism of membrane raft targeting of Cell adhesion receptor CD44 in neutrophils.

This was followed by another postdoctoral assignment at the McGee Juvenile Diabetes Research foundation, Medical College of Wisconsin, Milwaukee. Here I worked on understanding the role of estrogen in protection of pancreatic beta cells against cytokine induced cell death.

Research Interests

1. Membrane Rafts in Normal Cellular physiology and During Disease conditions

Membrane lipid rafts are dynamic micro-domains enriched in cholesterol, sphingolipids and highly selective repertoire of proteins. These micro-domains have the ability to selectively include/exclude proteins and regulate their activity. Raft micro-domain play an essential function in signal transduction, protein trafficking, membrane transport, immune activation, cell adhesion, migration and host pathogen interaction, and have been implicated in pathogenesis of various diseases like Cancer, Cardiovascular disorders, Neurological disorders and Infertility.

I am interested in understanding the mechanistic basis of membrane raft assembly and mapping raft proteome/lipidome using mass spectrometry and advanced imaging techniques. Apart from these I also plan to study the constitution of raft micro domains in normal cells and during disease conditions.

2. Exosomes in Normal Cellular physiology and During Disease conditions

Exosomes are extra-cellular membrane vesicles which contain many constituents of a cell, including DNA, RNA, lipids, metabolites, and proteins. Recent studies have shown that exosomes play an important role in inter-cellular transport of nucleic acids, proteins and lipids. These extrinsic components have potential to alter biological response of the recipient cells and have been associated with immune responses, cardiovascular diseases, cancer, nervous system associated disorders and viral diseases.

Exosomes have potential utility not only for disease prognosis but as therapeutic delivery vehicles of siRNAs, antisense oligonucleotides, chemotherapeutic agents, and immune modulators with an ability to direct their delivery to desired target cells.

I am interested in understanding the basic biology of exosomes, their composition, origin and interaction with recipient cells and the role of exosomes in normal cellular physiology and in disease conditions. I plan to pursue these questions using Flow Cytometry, Cryo-EM, and Mass spectrometry.

Report on [✓] Work Shop on Statistics and

Date: 29.03.2025 - 09.04.2025 Computer Basics
(3 weeks)

Venue: Smart Class

Presenter: Dr. Pariza R. Singh, Dr. Khemsaj Chandra,
Dr. Deepale Karlyap, Dr. Vaibhav Shankar Son,
one Tabseem Ali, Dr. Deepale Chakr.

Introduction:

Such a workshop was need of hour,
where our pg students need more of
experts guidance in area of Research
and Statistics and Computer Basics.

Background of the Speaker:

All faculties were expert speakers
with many years of experience in
the relevant subjects.

Key Highlights of the Lecture:

Conceptual understanding of statistical measure
- meaning, definition, scope, importance.
Classification and tabulation of data.
Central tendency, mean, Median mode
Graphic presentation, frequency polygons.

Conclusion:

Complete learning regarding statistics
and computer Basics.

TENTATIVE SYLLABUS

Unit	Topics	Contents
I	Conceptual understanding of statistical measures	Statistics - Meaning, definition, scope, importance, characteristics, distrust of statistics. Classification and tabulation of data. Measurement of central tendency Mean Median Mode
II	Graphic presentation of data	Frequency distribution Histogram Frequency polygons Frequency curve Ogive Binomial distribution Parametric and non-parametric tests
III	Methods of Dispersion and variation	Mean deviation Standard deviation Independence of attributes 2x2 and rec contingency tables Quartile deviation Analysis of variance one way method Direct and short cut. Chi square test Goodness of it Application of student 't' test for small samples
IV	Correlation	Correlation-definition, meaning and types. Methods of determining coefficient of correlation Product moment correlation Rank correlation.
V	Computer Basics	Computers- Characteristics components of computer system, block diagram of computer, CPU, I/O devices and memory (RAM and ROM) second storage devices (hard disk Floppy disk, Magnetic tape etc.) Computer generations Classification of computers: Analog digital hybrid general and special Types of computers Micro, Mini, Mainframe and super computer. Getting started with word , formatting text and paragraph. Working with MS Word Applying text and language tools, designing pages, with columns and tables, using graphics.
